

## Using the Breaker

- Wear protective equipment including ear defenders and goggles.
- The breaker should not be switched on until the tool is on the work surface. It should not be switched on if the tool has no load.
- Keep the cable clear of the tool bit and any sharp edges on the work.
- Watch out for signs that vibration may be affecting the hands. If fingers start to tingle or feel numb operators should take a short break from using the machine. Fingers should be exercised to encourage blood flow.
- To help prevent vibration affecting the hands, the machine should be operated for shorter periods. Hands should be kept warm – wearing gloves may help to do this.
- If operators think the cable may be cut or damaged in any way, the machine must be switched off and unplugged before inspecting it.
- Care should be taken not to accidentally pull the plug from the socket.
- Switch off and remove the plug from the socket before leaving the breaker unattended.
- If the equipment does not work properly do not attempt to repair it. Contact the hire company.

- The extension cable should be laid out carefully avoiding liquids, sharp edges, doorways or windows where it might run tripped, and places where it might run over it.
- Use the "TEST" button to check that the red is working each time the machine is used. Reset the red according to the instructions supplied with it.
- If an extension cable is needed, only a suitable rated heavy duty cable should be used, not longer than 50 metres (160 feet).
- Plugs directly into the 230V socket. Do not use any 230V extension cables.
- If an extension cable is needed, follow any extension cable instructions given by the hire company. If the hire company have not given any suitable rated heavy duty 110V extension cables, follow the hire company's instructions.
- The hire company have a yellow industrial plug transformer directly into the 230V socket. Do not use any 230V extension cables.
- Only the correct tool bits specifically for this tool should be used.
- Switch the breaker off, and unplug it before changing the tool bit.
- Switch the breaker off, and unplug it before cleaning the tool bit.
- Use a residual current device (rcd) plug rated differently to the rcd. This will help to protect the user. Plugs with the machine socket directly to the rcd. This will help to protect the user from electric shock if the cable gets damaged.
- Working each time the machine is used, reset the red according to the instructions supplied with it.
- Only the correct tool bits specifically for this tool should be used. No other tool bits should be used.
- Check that the available supply connection meets not be forced or improvised.
- Breakers that are available makes a large amount of dust and debris, cover any surfaces of objects that may be damaged.
- Check that there are no buried pipes where the work is being carried out.
- Check the machine, cables, plugs and tool bits. If anything is found to be damaged, do not use the breaker – contact the hire company.
- Check the machine, cables, plugs and tool bits around the work area. Protect other people from the noise, debris and dust.
- Make sure that the area is nearby who could cause a distraction.
- Do not use this breaker where there is a danger of explosion. It will ignite flammable petrol or gas cylinders.
- Before starting work... **Useful Reference Points • [www.hae.org.uk/businessguard](http://www.hae.org.uk/businessguard)**

## Heavy Breaker

The rules and procedures in force where people are at work may require the person responsible for this equipment to carry out a specific risk assessment.

**It is important to read all of this leaflet**

**BEFORE you use the Breaker**

- Electricity is dangerous and must always be used with great care.
- This heavy duty breaker is designed for breaking up roadwork, concrete and asphalt surfaces; and compacting, using the appropriate tools.
- The action of this breaker can cause injury or damage if the machine is not used in a careful and controlled way.
- If operators have not used a breaker before, they should familiarize themselves with the machine on some straightforward work before starting on the main task.
- The work should be planned ahead and thought out to make sure that it will be carried out safely.
- The following items of personal protective equipment must be worn as a minimum:  
Impact resistant goggles  
Dust mask  
Ear muffs  
Safety boots  
Gloves
- This machine must not be used by minors, or by anyone under the influence of drugs or alcohol.
- This breaker is designed for operation by an able bodied adult. Anyone with either temporary or permanent disability must seek expert advice before using it.

Every effort has been made by HAE/EHA to ensure that the information given in this document and supporting material is accurate and not misleading. HAE/EHA cannot accept responsibility for any loss or liability perceived to have arisen from the use of any such document/material. Only Acts of Parliament and Statutory Instruments have the force of law and only the courts can authoritatively interpret the law.

- This equipment is unlikely to cause noise levels or plugs giving protection up to this level must be worn as a minimum.
- Air portable dust mask is required when using this machine.
- The breaker should always be gripped with two hands while working.
- The breaker should always be worn as a minimum.
- Vibration from this machine must be reduced when using this machine.
- Breakers starting work, and gloves should be worn to keep hands warm whilst working.
- This breaker must only be used pointing down on floors or roads.
- Operators should check how the on/off switch operates – before switching the breaker on must be known how to stop it.
- Anybody working nearby will also need to wear personal protective equipment.

### TOOL BITS

**Before Starting Work...**

- The extension cable should be laid out carefully avoiding liquids, sharp edges, doorways or windows where it might run over it. It should be fully unravelled or it will trip, and could catch fire.
- Extension cable connections must be kept dry and safe.
- The extension cable should be laid out carefully avoiding liquids, sharp edges, doorways or windows where it might run over it. It should be fully unravelled or it will trip, and could catch fire.
- Breakers or switches where the cables where it might run over it, it should be fully unravelled or it will trip, and could catch fire.
- Protect other people from the noise, debris and dust.
- Make sure that the area is nearby who could cause a distraction.
- Do not use this breaker where there is a danger of explosion. It will ignite flammable petrol or gas cylinders.
